Your personal progress report

2026-10-01 - 2026-10-15

Partial first period: tracking began during this reporting window.

Personal summary

Estimated 1RM · Potisk s prsi · Športna oprema · Čvrst prijem · Železo: Recorded average: 71.2 → 74.2 kg. Descriptive change within this period.

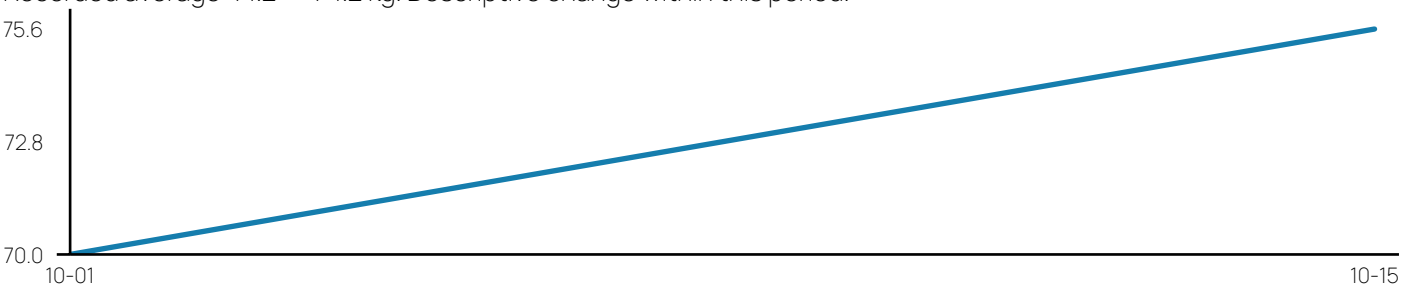
Observations describe patterns, not proof of cause. Missing records remain unknown.
Associations use up to 180 days before the period boundary.

Strength & overload

Estimated 1RM · Potisk s prsi · Športna oprema · Čvrst prijem · Železo

Descriptive change / 15 observed days / 100% calendar coverage

Recorded average: 71.2 → 74.2 kg. Descriptive change within this period.



- Logged days may not represent unlogged days.
- Includes estimates, not direct measurements.
- This change does not identify its cause.

Still collecting data

Daily context: no supported observations in this period.

Fasting: no supported observations in this period.

Nutrition: no supported observations in this period.

Body & Dream Physique: no supported observations in this period.

Sleep & recovery: no supported observations in this period.

Supplements: no supported observations in this period.

Advanced techniques: no supported observations in this period.

Training configuration: no supported observations in this period.

Changes & personal experiments

Next steps

Keep logging comparable sessions and daily context. Choose one optional change at a time. Review incomplete categories before drawing conclusions about supplements or diet.

Methods & sources

Methods reviewed 2026-10-16. Descriptive comparisons require at least 3 days in each half; exploratory associations require 8 weekly blocks, detrending, 999 permutations and Benjamini-Hochberg correction. These are product screening thresholds, not proof of individual treatment effects.
